Bulk & Chemical Logistics

BATI Chemical Logistics offers fully integrated multimodal transportation solutions for the shipment of bulk chemical products to locations worldwide, with a diverse fleet of equipment manufactured to maximize a variety of products.

BATI Chemical Logistics has the expertise to expedite all of your global formalities and transportation needs. Stock control of products in transit, the so-called floating stock, is one of our specialties.

Offering customized logistic solutions is one of our core activities.

These solutions embrace all aspects of supply chain management from pre-production to dispatch and final delivery.

Flexi Tank Services

Basic Advantages of Flexi Tank

- Your transportation expenses will be significantly reduced. Compared to tank-containers, you will only pay for one-way freight of 20-foot containers. You are not required to pay for the return of the container, saving more than 500 Euros per transportation.
- FLEXI TANK can be used as packaging for the cargo. In comparison with cost of drums or other capacities you save at least 30-40% on packaging expenses.
- You save up to 90 % on time for loading and unloading of the cargo.
- No need to clean FLEXI TANK after transportation as it is disposable.
- You reduce losses of cargo during unloading. In comparison - losses during unloading from FLEXI TANK are 0.1%, while the unloading from drums results in losses of 1%.
- You load %15 more than IBC's, %40 more than DRUMS, %50 more than BOTTLES.

Numbers and Stations in Flexi Tank

Annual Volume of
2500 Flexibags

2 warehouses with
our own team
